Pilling’s Optical Forceps allow for precise control and visualization in biopsy and foreign body removal procedures. A telescope joined with forceps provides a close-up view of the object being grasped.

The optical forceps can be used in many types of airway management procedures where accurate depth perception is imperative for visualization.

**THREE SIZES AVAILABLE**
Pilling’s Optical Forceps consist of two components – telescope and forceps. The forceps are available in three sizes:
- Adult
- Adolescent
- Pediatric

**MULTIPLE JAW TYPES**
Forceps in all three sizes are available in three jaw types:
- Alligator
- Biopsy
- Peanut

**FEATURES AND BENEFITS**
- Autoclavable telescopes.
- Telescopes come standard with ACMI, Richard Wolf and Karl Storz cable adapters.
- Interchangeable with comparable competitive products.
- Telescope’s universal eye-piece easily attaches to video systems.
Founded in 1814, the world’s premier surgical instrument manufacturer is dedicated to designing and manufacturing hand-held surgical instruments of the highest caliber. Surgeons worldwide, in open and minimally invasive procedures, prefer these instruments.

**PILLING WARRANTY**

Pilling warrants that all Pilling instruments stamped or etched with the Pilling name shall be free from manufacturer defects in material or workmanship for the life of the instrument.
