Focus on safety and performance – when every second counts

Cricothyrotomy is a last resort potentially life-saving emergency procedure when immediate access to the patient’s otherwise non-accessible airway is to be obtained. Quick-time decision, speediness, safe and accurate performance are critical in one of the most stressful situations for the clinician.

Introducing Teleflex’s Rüsch brand EasyCric emergency cricothyrothomy set invented by Prof. Giulio Frova, this procedure can be made safer, easier and more efficient and thus help to improve patient outcome¹.

The unique EasyCric features a Seldinger-based guide-wire technique for safe and accurate placement.

Thanks to the hydrophilic coating and anatomical design of the entire device (premounted tube and dilator, ergonomic grip, fixed neck-plate), an easy and atraumatic insertion as well as safe handling for the clinician can be secured. Well-aligned accessories such as a puncture needle, syringe and the saline solution to perform the air aspiration test via the syringe & to activate the hydrophilic coating, complete the set.

EasyCric emergency cricothyrothomy set is a back-up device when every other procedure is impossible. Having a set readily available at all times may save a patient’s life.

Blue insertion dilator with ergonomically shaped grip area for safer handling.

**Dimensions acc. to DIN EN ISO 5366-1**

- **midline**
- **fixation flange**
- **reference level**

**Set Components**

1. EasyCric Tracheostomy Tube, transparent, 15 mm connector & fixed transparent neckplate, pre-mounted on the EasyCric Insertion Dilator, blue
2. Guide-wire (non-kinking, straight soft tips, 40 cm long, Ø1.3 mm)
3. Comfort neck band
4. Puncture needle (3 cm)
5. Scalpel
6. Luer-lock syringe (5 ml)
7. 20 ml saline solution
