CONVENIENT AND CLOSE TO NORMAL LIFE
Catheter Valve

When you lead an active lifestyle, you need a catheter solution that allows you to carry on with everyday life and to be out and about whether on business, pleasure or travelling.

The Teleflex catheter valve improves your mobility and gives you more independence and comfort, since it makes wearing a urine drainage bag no longer necessary.

The Teleflex catheter valve is a discreet lever tap which is connected to the catheter funnel and enables the bladder to be emptied easily and freely.

Teleflex offers here another option for a safe, comfortable and discreet continence management.

INFORMATION
Gives a feeling close to normal bladder function.
Connect the catheter valve securely to the funnel of the catheter and make sure that the lever tap is in closed position.

If desired, a urine collection bag can be connected with the silicone extension tube of the catheter valve (e.g. during the night). In this case the lever tap has to be opened so that the urine can flow freely into the bag.

**APPLICATION INFORMATION**

Connect the catheter valve securely to the funnel of the catheter and make sure that the lever tap is in closed position.

If desired, a urine collection bag can be connected with the silicone extension tube of the catheter valve (e.g. during the night). In this case the lever tap has to be opened so that the urine can flow freely into the bag.

**DISCREET OPTION FOR IMPROVED INDEPENDENCE AND COMFORT**

- provides more independence and mobility
- gives a feeling close to normal bladder function
- no need for a urine drainage bag
- easy to handle, even with limited manual dexterity, due to a comfortable lever tap mechanism
- inconspicuous due to lever tap with low profile lever that lies flat against the tube end
- secure connection ensured by a ridged universal connector
- flexible due to silicone extension tube for connecting a urine collection bag, if needed
- suitable for all common catheters
- latex-free
- sterile
- single use

We care about your health and your quality of life.

* Considering your individual general and anatomic condition, your health-care professional will advise you if a catheter valve is the best option for you.
