The quality of care you demand for your patients
Arrow® FlexTip Plus® Epidural Catheter now with NRFit™ connectors.

Teleflex has adopted ISO 80369-6 standards to support efforts to improve patient safety in neuraxial settings. The NRFit™ connector is designed to reduce the possibility of misconnection between devices that are not intended to connect.

The Arrow® FlexTip Plus® Epidural Catheter from Teleflex is clinically proven to significantly reduce complications in the epidural space. This unique polyurethane catheter is designed to provide the precise balance of characteristics needed to get ease of placement, reliable patency, and optimum indwelling characteristics. This technology is available in both open-tip and closed-tip catheter configurations, so you can achieve the drug dispersion you prefer with the quality of care you demand for your patients.

Reliable patency
The coil reinforcement makes the FlexTip Plus® Catheter kink resistant to better maintain patency, even in some situations that might cause ordinary polyurethane catheters to fail.

Less inadvertent penetration
The soft, flexible tip is designed to deflect when it contacts the dura or blood vessels, which significantly reduces the risk of vessel puncture and paresthesia.

The results are enhanced comfort and safety for the patient and greater ease of use and reliability for the anesthesia provider.
17 Ga. x 3-1/2" Tuohy, Removable Wings
10 ml, Slip, Plastic

17 Ga. x 3-3/8" Hustead, Removable Wings
