The StatLock® Stabilization Device provides an alternative to sutures by using an adhesive pad to adhere the device to the skin and locking wings that secure the catheter in place. This enables easier application by the clinician while reducing the risk of inadvertent needle stick and reduces the complications associated with sutures such as catheter-related infections.

Arrow® IAB Catheters* have been custom designed to be compatible with the StatLock Device, allowing the Arrow IAB Catheter to be secured in place on both the hemostatis cuff and the proximal tie down. Follow manufacturer’s IFU for IAB Catheter securement recommendations.

The StatLock Device for Arrow IAB Catheters is designed to:

- Remove the possibility of Healthcare Provider needle stick
- Reduce suture wound complications including occurrence of catheter-related bloodstream infections.
- Provide patient comfort
- Be easier and faster to apply

The StatLock Device for Arrow IAB Catheters is designed to:

- Remove the possibility of Healthcare Provider needle stick
- Reduce suture wound complications including occurrence of catheter-related bloodstream infections.
- Provide patient comfort
